

Biomes and Climate - Matching

A biome's location on Earth depends upon the climate – rainfall amounts and temperature – and will support living things that can tolerate and thrive in that habitat. Choose the climate that best describes each of the following biomes and connect them with an arrow.

**arctic
tundra**

**deciduous
forest**

**tropical
rainforest**

**very hot with
rare rainfall**

**hot with abundant
rainfall only in rainy season**

**changing seasons with good
precipitation year round**

**colder climate with fair
precipitation year round**

**very hot with abundant
daily rainfall**

**very cold with moisture
trapped above permafrost**

**boreal
forest**

desert

**savannah
(grassland)**
